Quiz 3
05/16/13

Name:

Consider the following argument:

“If my computations are correct and I pay the electric bill, then I will run out of money. If I don’t pay the electric bill, the power will be turned off. Therefore, if I don’t run out of money and the power is still on, then my computations are incorrect.” (use $C, B, R, P.$)

Is this argument valid? If yes, give a proof, if not give a counterexample.
